Module3 – Blockchain technology

L18 - Blockchain Applications and Ecosystem

Lars-Petter Helland, 22.10.2018

Today

- › Recap of last lecture
- › Oblig3?
- › Properties of blockchain technology
- › Applications of blockchain technology
- › The blockchain ecosystem

Reading material

- › **[??]** ... <https://rubygarage.org/blog/implementing-blockchain-in-business> ??
- › **[??]** ... <http://www.visualcapitalist.com/the-bitcoin-universe-explained/> ??

Recap of last lecture

- › Signing a transaction
- › Transaction validation check list
- › Locking and unlocking scripts
- › Merkle tree / -root / -path
- › Simplified Payment Verification (SPV)
- › Block validation check list

Locking Script
(scriptPubKey)

DUP HASH160 <PubKHash> EQUALVERIFY CHECKSIG

Lock Script (scriptPubKey) is found in a transaction output and is the encumbrance that must be fulfilled to spend the output

Oblig3 - questions?

Block3:

CoinbaseTx (HVkO3OLGTr1QzKsUKp3fxw/DVvheReRHbekCA1KuvBY=)

message=Hello again, output=Output [value=100, address=kFn1+kOrdmbP...=]

Transaction (zzR7MngsWm/BzF9FQ8cKi67JwO2izO1Awj77i9ayPik=)

inputs=

--> Output [value=100, address=kFn1+kOrdmbP/KHvrr9cD7wJ//QekWEuUQN29ayrI0w=]

Input [prevTxHash=zzR7MngsWm/BzF9FQ8cKi67JwO2izO1Awj77i9ayPik=, prevOutputIndex=0]

--> Output [value=20, address=f4WSHTd3/57vb7//EI8RF0L23Jl9f//rgozGAOftnP0=]

The miner's wallet:

Wallet [id=Miner's wallet, address=kFn1+kOrdmbP...=, balance=260]

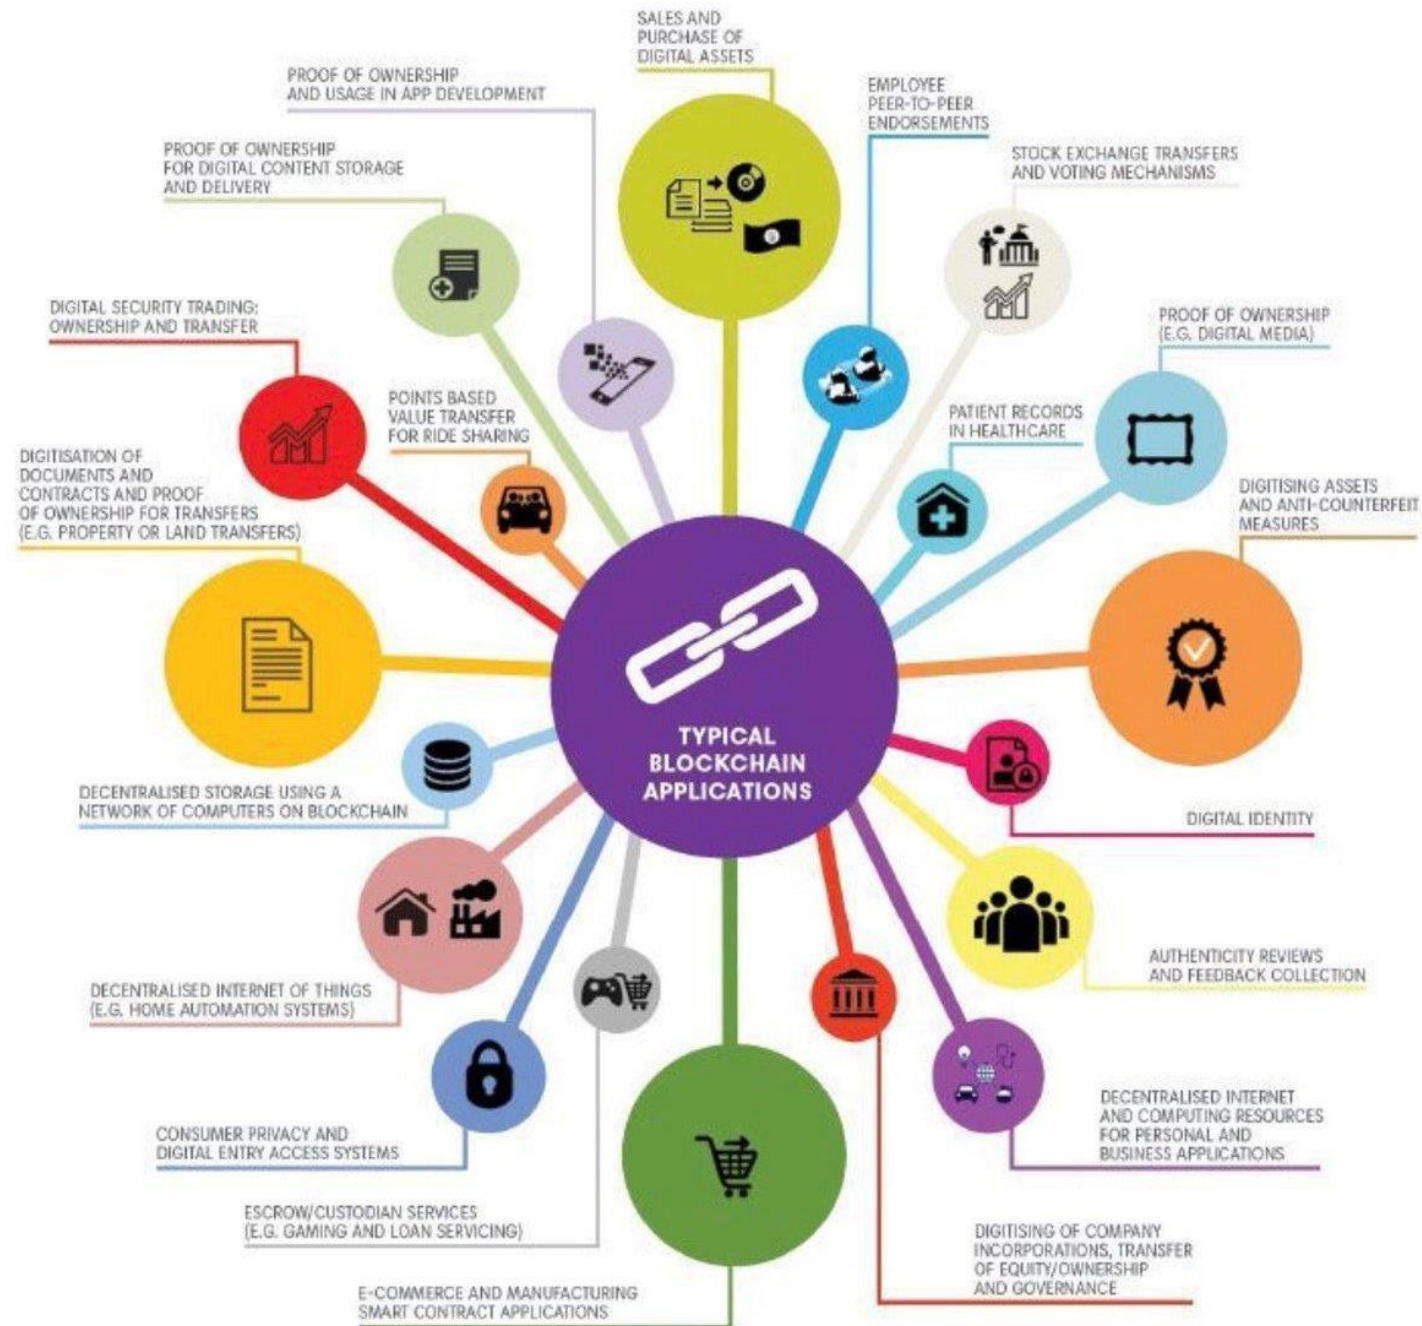

My wallet:

Wallet [id=Lars-Petter's wallet, address=f4WSHTd3/57vb7...=, balance=40]

Blockchain Applications

(meaning: what blockchain tech. can be used for)

- › Before we look at possible applications, I think **we should investigate the claimed properties** of blockchain technology.
- › It is difficult to have a strong opinion about these things, but a break down and a discussion will always help.
- › A also think that before we investigate the properties, **we also need to clarify what a blockchain is.**
- › Opinions differ, and it is difficult to find a common definition.

What is a blockchain

- › It is a digital **ledger** recording transactions
 - › It is **cryptographically secured, tamper resistant chain** of records
 - › It is an **append-only** data structure
 - › It is **decentralized** / distributed
 - › It uses some **consensus protocol** on write/append
-
- › See <https://medium.com/@richbodo/common-use-of-the-word-blockchain-5b916cecef29> for a discussion about the term.

What is a blockchain, cont. ...

- › Does it need to be publicly available?
 - › Some are totally public (like Bitcoin), and some are totally private inside a company. **A private blockchain lacks some properties compared to a public one.**
- › How decentralized does it need to be?
 - › Some are quite decentralized (like Bitcoin), and some are more centralized. **A centralized blockchain lacks some properties compared to a decentralized one.**
- › Does it need to have an associated cryptocurrency/-token?
 - › Most uses a cryptocurrency as an incentive for securing the blockchain. **A blockchain will lack some properties if there is no crypto.**

Equivalent to Internet
in 1990ies?

Public Blockchains

Bitcoin
Ethereum
Litecoin
etc...

Equivalent to Intranet
in 1990ies?

Federated Blockchains

**Internet of
Blockchains?**

A list of common "claimed" properties

<https://rubygarage.org/blog/implementing-blockchain-in-business>

- Removing the need for a third party (disintermediation)
- Permissionless use / transactions
- Transactions without trust
- Transparency
- Immutability
- Privacy
- Giving the users ownership over their transactions and data
- Time and cost efficiency
- Security and robustness
- Fraud reduction

Removing the need for a third party

- › This was one of the original main selling points.
- › The ability to do direct peer-to-peer transactions without needing a clearing house (bank).
- › This property enables the community of users to set the policy of how things are done (rules, fees, ...) .
- › A truly **disruptive** property.

Permissionless use / transactions

- › Permissionless ledgers means **access for all**.
- › Like the Internet, no consent is required from any central authority or group.
- › This is a **democratic** property, empowering the people.
- › *"Banking the unbanked".*

Transactions without trust

- › Normally when you do transactions with someone, you need to trust each other or rely on a trusted 3rd party.
- › The whole blockchain machinery, the algorithms, the crypto, the consensus protocol, make trustless transactions possible.
- › You only have to rely on math and computer code doing it job.

Transparency

- › Transparency means that everyone can see what has happened.
- › The transparency of a blockchain stems from the fact that the holdings and transactions of each public address are open to viewing.
- › It adds a degree of accountability that has not existed before.

The fall of Lehman Brothers

- ✦ The demise of Lehman Brothers can only be understood within the context of the current financial crisis, the biggest financial crisis since the Great Depression. The roots of this crisis have to be found in bad regulation, lack of transparency, and market complacency brought about by several years of positive returns.

Immutability

- › This means that the data is **tamper proof**.
- › It should not be feasible to change data in a blockchain.
- › The strength of this property is related to the **consensus mechanism**, but also to the **degree of decentralization**.
- › Bitcoin's **Proof Of Work** is what makes it tamper proof.

Privacy

- › Privacy becomes more and more important as we live our lives digitally.
- › Why should the bank (or Rema1000) know how we spend our money?
- › Why should Google know all our daily movements? ...
- › Blockchain offers decentralized solutions that prevents central actors from collecting and analyzing data about our lives.
- › By adding layers of cryptography, the data itself can also be protected from snooping.

Giving the users ownership over their transactions and data

- › Why should we not own our own data? Why should Facebook own and monetize our data?
- › A decentralized social network can f.ex. let the users decide how much personal data is shared and which advertisers they will support.

Time and cost efficiency

- › Automation, global open standards

Robustness (withstands malicious attacks)

- › Relies on a well functioning network ...
- › Redundancy
- › No single point of failure
- › Strong consensus rules ...

Fraud reduction

- › Transparency, ...
- › Smart contracts, ...

Does a blockchain need a token?

<https://hackernoon.com/why-use-the-blockchain-instead-of-a-database-what-gives-tokens-value-263449681153>

- › Blockchain embodies a lot of game theory and incentive models. In order for a blockchain network to be valuable or useful, it has to have participants.
- › There needs to be some sort of incentive to attract them. The most common method is via issuance or reward of the token used in the network.
- › Tokens are important to secure the network, both by rewarding block validators, and by preventing spamming.
- › So, **yes**. (Unless you run a private blockchain.)

Different types of tokens

- › **Currency tokens**—Tokens like Bitcoin, Monero, Nano, etc
- › **Utility tokens**—Tokens that allow you to essentially use or perform an activity on a network, such as Ether or OX. On the Ethereum network you would need to spend Ether (aka gas), to run a smart contract, etc
- › **Asset tokens**—Tokens that represent an actual asset or product
- › **Equity tokens**—Tokens that basically act like a share, and gives you some kind of voting right or consensus participation

Blockchains without tokens

<https://medium.com/swlh/does-a-blockchain-need-a-token-66c894d566fb>

R3's Corda and IBM's Fabric.

- › Consensus on Corda is reached at a transaction level and only involves parties privy to a transaction. There is no “proof of work” or “miners” in order to verify transactions.
- › As Philipp Sandner explains in his blogpost, *“Consensus is based on transaction validity and transaction uniqueness. Validity is ensured by running the smart contract code associated with a transaction, by checking for all required signatures and by assuring that any transactions that are referred to are also valid. Uniqueness concerns the input states of a transaction. Specifically, it has to be ensured that the transaction in question is the unique consumer of all its input states. In other words, there exists no other transaction that consumes any of the same states. The reason for this is to avoid double-spends.”*

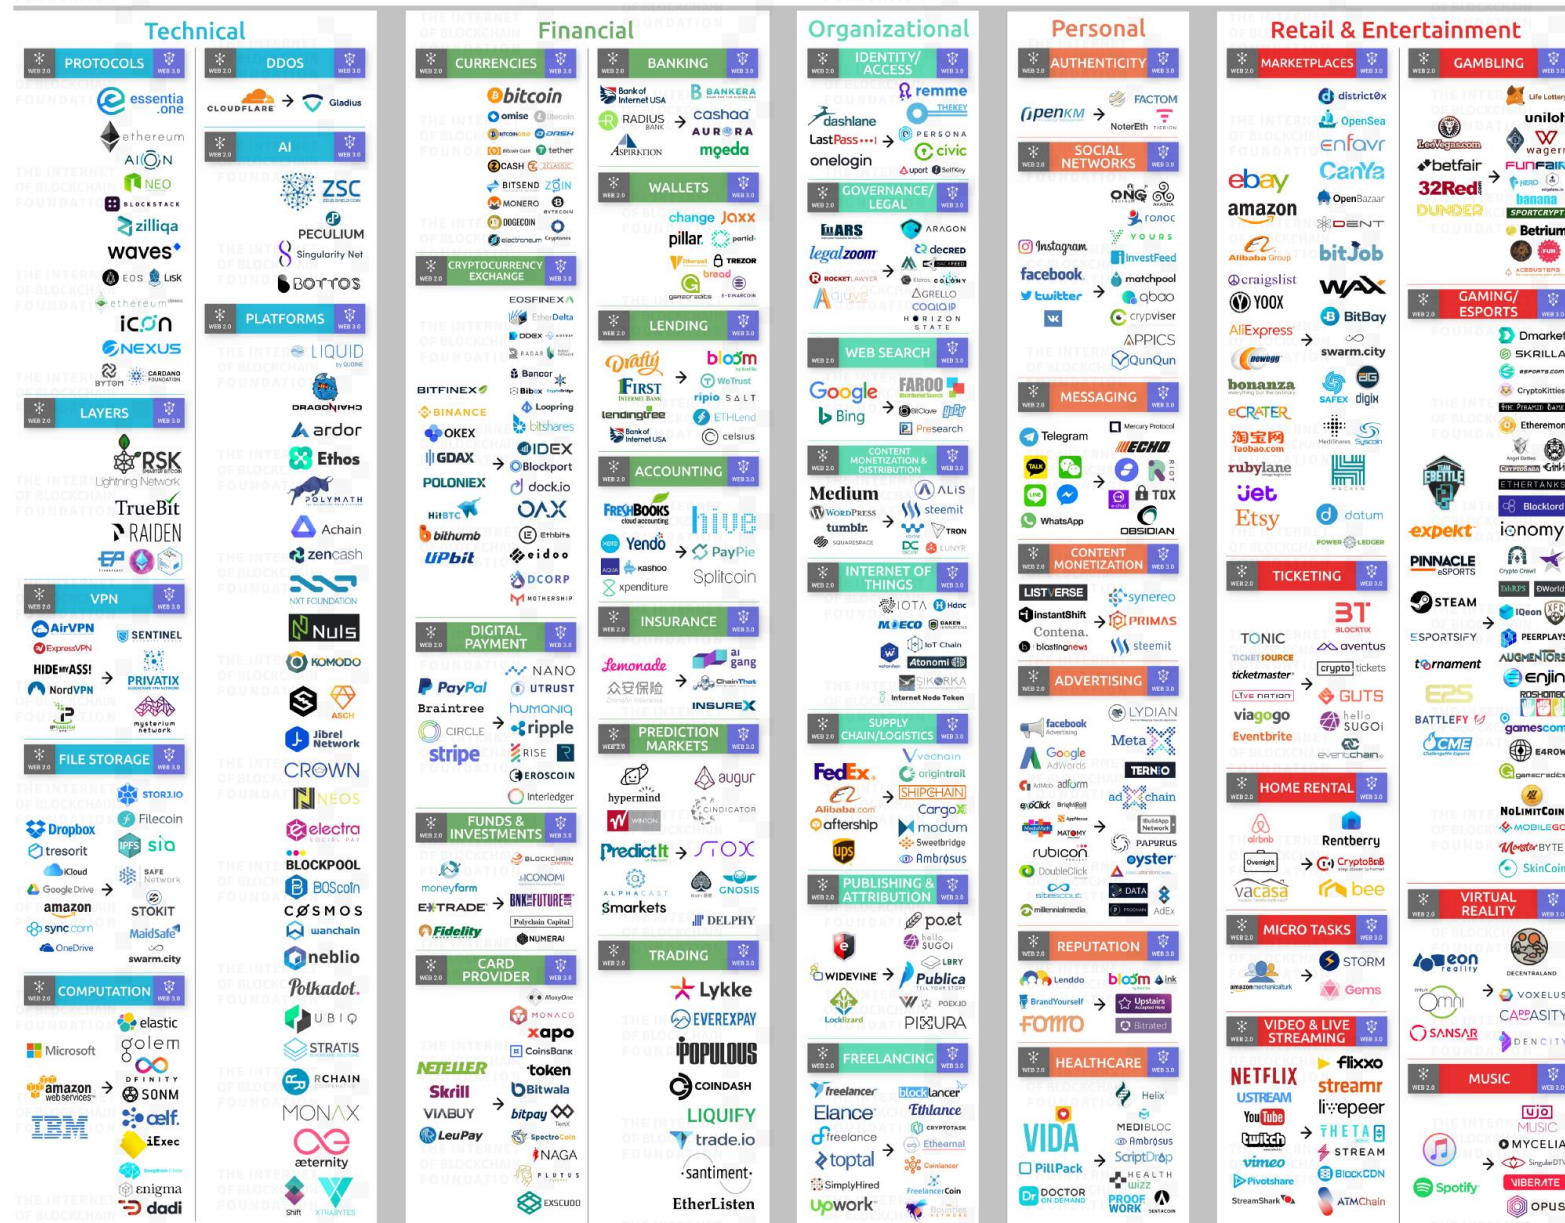

Pause

WEB 2.0 → WEB 3.0 COMPARISON LANDSCAPE.

WELCOME INTERNET OF BLOCKCHAINS

50+ BLOCKCHAIN REAL WORLD USE CASES

GOVERNMENT

Essentia develops world's first blockchain solution to manage international logistics hub together with Traffic Labs and the Finnish Government

essentia.one

IDENTIFICATION

Voter registration is being facilitated via a blockchain project in Switzerland spearheaded by Uport.

uport

MOBILE PAYMENTS

The blockchain ledger that Ripple uses has been latched onto by a group of Japanese banks, who will be using it for quick mobile payments.

ripple

INSURANCE

A smart contract-based blockchain is being used by insurer American International Group Inc as a means of saving costs and increasing transparency.

AIG

ENDANGERED SPECIES PROTECTION

The protection of endangered species is being facilitated via a blockchain project that records the activities of these rare animals.

CARBON OFFSETS

IBM is using the Hyperledger Fabric blockchain in China to monitor carbon offset trading.

IBM HYPERLEDGER

ENTERPRISE

Ethereum's blockchain can be accessed as a cloud-based service courtesy of Microsoft Azure.

Microsoft Azure

BORDER CONTROL

Essentia has devised a border control system that would use blockchain to store passenger data in the Netherlands.

essentia.one

SUPPLY CHAINS

IBM and Walmart have partnered in China to create a blockchain project that will monitor food safety.

IBM Walmart

HEALTHCARE

A number of healthcare systems that store data on the blockchain have been pioneered including MedRec.

MEDREC

SHIPPING

Shipping is a natural fit for blockchain, and Maersk have been trialling a blockchain-based project within the maritime logistics industry.

MAERSK

REAL ESTATE

Blockchain is now being used to complete real estate deals, the first of which was conducted in Kiev by Propy.

PROPY

ENERGY

Essentia is developing a test project that will help energy suppliers track the distribution of their resources in real time, whilst maintaining data confidentiality.

essentia.one

LAND REGISTRY

Land registry titles are now being stored on the blockchain in Georgia in a project developed by the National Agency of Public Registry.

NATIONAL AGENCY OF PUBLIC REGISTRY

COMPUTATION

Digital Currency Group are helping Amazon Web Services examine ways in which the distributed ledger technology can help improve database security.

DIGITAL CURRENCY GROUP

ADVERTISING

New York Interactive Advertising Exchange has been experimenting with blockchain as a means of providing an ads marketplace for publishers.

NYIAX

BORDER CONTROL

Essentia is developing a blockchain project for border control that will allow customs agents to record passenger data from an array of inputs and safely store it.

essentia.one

JOURNALISM

Decentralized journalism, as enabled by blockchain technology, has the potential to prevent censorship and increase transparency, as Civil has shown.

CIVIL

WASTE MANAGEMENT

Waltonchain is using RFID technology to store waste management data on the blockchain in China.

ENERGY

Food importation is another industry where blockchain is proving its worth, with Louis Dreyfus Co trialling a soybean importation operation using this technology.

LDC

DIAMONDS

The De Beers Group is using blockchain to track the importation and sale of diamonds.

DE BEERS GROUP OF COMPANIES

FINE ART

By storing certificates of authenticity on the blockchain, it's possible to dramatically reduce art forgeries, as one blockchain project is proving.

NATIONAL SECURITY

For the past two years, the US Department of Homeland Security has been using blockchain to record and safely store data captured from its security cameras.

DEPARTMENT OF HOMELAND SECURITY

TOURISM

In a bid to boost its tourism economy, Hawaii is examining ways in which blockchain-based cryptocurrencies can be adopted throughout the US state.

STATE OF HAWAII

TAXATION

In China, a tax-based initiative is using blockchain to store tax records and electronic invoices led by Miaocai Network.

ENERGY

Chile's National Energy Commission has started using blockchain technology as a way of certifying data pertaining to the country's energy usage as it seeks to update its electrical infrastructure.

CNE COMISIÓN NACIONAL DE ENERGÍA

RAILWAYS

Russian rail operator Novotrans is storing inventory data on a blockchain pertaining to repair requests and rolling stock.

HOBOTPAHC

ENTERPRISE

Google is building its own blockchain which will be integrated into its cloud-based services, enabling businesses to store data on it, and to request their own white label version developed by Alphabet Inc.

Google Alphabet

MUSIC

Arbit is a blockchain-based project led by former Guns N Roses drummer Matt Sorum seeking a fairer way to reward musicians for their creative efforts.

arbit

FISHING

Blockchain technology has been used to provide a transparent record of where fish was caught, as a means of ensuring it was legally landed.

IMPLEMENTING BLOCKCHAIN IN BUSINESS

The blockchain is based on principles of disintermediation, transparency, time and cost efficiency, process integrity, and security. And this is how exactly businesses benefit from the blockchain principles:

 Time & cost efficiency  Security  Transparency  Records keeping  Fraud reduction  Smart contracts  Privacy  Decentralization

BANKING

Reduced transaction costs and settlement time

Improved transactions security and data quality

GOVERNANCE

Reducing corruption at state level

More opportunities for businesses to manage their assets

PREDICTION MARKETS

Low fees

Safe automated payment

Accurate forecasting & crowdsourced reporting

SUPPLY MANAGEMENT & RETAIL

Proof of ownership & resale

Transparency in logistics, storing & real-time tracking each stage

Increased trust due & information evidence

INSURANCE

Eliminating the cost and time of processing insurance claims

Transparency and relevant records keeping

Reducing the opportunity for insurance fraud

CAR LEASING

Reducing time for procurement process

Simplified leasing process

Blockchain as the foundation for smart assets

HEALTHCARE

Reduced time and increased efficiency in providing insurance quotes

Tamper-resistant means for data storage

EDUCATION

Eliminating claims of un-earned educational credits

Improved verification procedures

Applications of blockchain technology

- › There are **so** many applications / use cases to choose from, so I am just going to pick a "few":
 - › Electronic Cash / Remittance
 - › Logistics / Supply chains
 - › Digital Identity management
 - › Tokenization
 - › Social media
 - › Education (courses, grades, diplomas)
 - › Supporting the Internet of Things
 - › Energy Market
 - › Healthcare

Electronic Cash / Remittance

- › This is maybe the most obvious case.
- › Bitcoin has proved itself over 10 years now as an alternative to traditional money.
- › The big hurdle now is scaling. Bitcoin can only process 7 transactions per second, while Visa can process > 1000 t/s. (people work on it)
- › Remittance means sending money home. Today, this is a very cumbersome process involving many instances. With cryptocurrencies, this is made really easy.
- › Examples:

Bitcoin

Litecoin

Dash

Monero

and many more..

Logistics / Supply chains

<https://www.investinblockchain.com/supply-chain-blockchain-projects/>

- › Traditional supply chain management is inefficient, cumbersome, lacks transparency, traceability and audits.
- › Many think that blockchain (and IoT) can solve all of these problems due to properties like:
 - › Storing and real-time tracking
 - › Transparency
 - › Increased data quality
 - › Immutability
- › Examples:

VeChain

Ambrosus

Waltonchain

OriginTrail

WaBi

Video supply chain?

- › Ambrosus <https://www.youtube.com/watch?v=DftD5gTPvWA>
- › WaltonChain <https://www.youtube.com/watch?v=mcxSe56jXqY>
- › OriginTrail <https://www.youtube.com/watch?v=g3gcQAYIMGQ>
- ›

Digital Identity management

<https://www.forbes.com/sites/forbestechcouncil/2018/07/27/how-blockchain-can-solve-identity-management-problems/#6a9d5a8413f5>

- › Most online activities require that you register and disclose personal information (name, address, email, credit card number, etc.).
- › This information is stored in many databases, is a problem to keep updated, and is a security/privacy risk.
- › Further, this information can be shared with third parties without the user's consent.
- › Blockchain can remedy this by letting individuals create and maintain a self-sovereign identity which is used to authenticate the user.
- › Examples:

Civic

Metaverse ETP TheKey

Namecoin

Bloom

Video civic/bloom?

- › Civic <https://www.youtube.com/watch?v=2XDGX41nr1o>
- › Bloom <https://www.youtube.com/watch?v=ntNKcBlw9FU>
- ›

Tokenization

<https://blockonomi.com/tokenization-blockchain/>

- › Tokenization means recording ownership of real world assets (stocks, gold, cars, houses, ...) on a blockchain. The ownership of a token prove the ownership of the real asset.
- › Both intangibles, fungible and non-fungible goods can be tokenized
- › Some say that "everything will be tokenized"
- › This will give undisputed record keeping and easy transfer of ownership.
- › It also enables dividing assets into smaller parts. For example can a token represent 1mg of Gold.
- › Examples:

DigixDAO

Cryptokitties (ERC-20)

Social media

<https://www.investinblockchain.com/blockchain-social-media/>

- › The most popular Social Media platforms today (Facebook, Twitter, Youtube, etc..) are company owned and centralized.
- › That also means that they use and sell your personal information (you are the product, the advertisers are their customers)
- › That also means that they can censor your posts / comments.
- › New distributed Social Media Platforms built on blockchain set out to solve these problems and create alternatives.

› Examples:

Steem

Sapien

Indorse

DTube

Education (courses, grades, diplomas)

- › "Using the power of blockchain technology and its smart contract-based payment platform, ODEM will enable students and educators to interact directly and participate in the exchange of education and learning, without the involvement of intermediaries. Our goal is to make quality education more accessible and affordable to a broader audience."
- › "BitDegree ... blockchain based reward system and achievement tracking."

- › Examples

ODEM

BitDegree

Video ODEM?

- › ODEM https://www.youtube.com/watch?v=B278U-V__gs

Supporting the Internet of Things

- › Examples

IOTA

Energy Market

- › Examples:

PowerLedger

WePower

Restart Energy

Electrify.Asia

Video energy?

- › Power Ledger https://www.youtube.com/watch?v=jMqMRs34_u8

Healthcare

- › Examples

Ontology

Dentacoin

MEDX

Medibloc

Docademic

-
- › Norwegian? (nødhjelp?, Obos, ...)
 - › Seminar next week?
 - › Federated?
 - › Private?

Technical solutions that enables these applications

- › Data storage on the block chain (or just the fingerprint)
- › Integration with other systems!
- › (IoT-) Devices that provide data.
- › Smart contracts! (Ethereum / EOS / i morgen)
- › An market for valuation / exchange / trading of tokens.
- › Infrastrucure (mobile apps, web apps, wallets, ...)

- › Second layers? for scaling
- › DAG / Tangle? for scaling

Kursbevisgreiene til Svein / MIT

- › Se på noen passasjer (fra erfaringsdokumentet) og se om de forstår det.
- › Et eksempel på at man faktisk kan bruke Bitcoin-nettverket til å lage kursbevis som ikke kan forfalskes

The blockchain ecosystem

- › The is a whole industry that is built up around these new blockchain solutions.
- › For developers, the job opportunities will not only be in blockchain companies, but also in companies in this ecosystem.
- › I found some infographics from 2015 that lists some of types of emerging businesses.
(There are probably more, and the growth since 2015 has been exponential)

MINERS

"Bitcoin opens up an entire world of opportunities. We are just now starting to realize how impactful this can be and we are very excited about the future."

Marco Streng
CEO, Genesis Mining

WALLETS

"At Coinbase, we're excited about the progress made thus far but we're still in the early days of the technology and even more excited about the app ecosystem and what the future of Bitcoin applications will look like."

Adam White
VP of Business Development,
Coinbase

STORAGE

"Bitcoin paved the way to decentralized security, and will jumpstart the usage of personal privacy devices."

Eric Larchevêque
CEO, Ledger

"Today there are more than 100,000 Bitcoin transactions per day for more than \$100 million and there are more than 5,000 servers acting as nodes of the network. Bitcoin is a lot less likely to disappear today than it was 2 years ago when the price was over \$1,000 per Bitcoin."

EXCHANGES

"Bitcoin startups like Gemini are ushering in a new chapter of legitimacy and integrity that will allow Bitcoin to go mainstream and fulfill its ultimate promise."

Tyler Winklevoss
Co-Founder and CEO, Gemini

PAYMENT PROCESSORS

"The original vision for Bitcoin was the creation of a peer to peer payment system for the Internet. We believe in that vision. The consistent growth we've seen in Bitcoin transactions over the last year shows that our customers are beginning to share that belief.

Bitcoin has put online payments into the hands of merchants and consumers. That change is going to be hard to ignore. This technology is on track to become a part of every major payment system in the coming five years."

Stephen Pair
CEO, BitPay

<http://www.visualcapitalist.com/the-bitcoin-universe-explained/>

MERCHANTS

"Bitcoin affords our customers an easy checkout process, while protecting us against fraud and chargebacks. We could not be happier with the results"

<http://www.visualcapitalist.com/the-bitcoin-universe-explained/>

INVESTMENT

<http://www.visualcapitalist.com/the-bitcoin-universe-explained/>

MEDIA & ADVOCACY

"We are privileged to be at the nexus where information meets technology, using a multimedia platform to support the adoption and innovation of Bitcoin and the blockchain. In only two years, the audience for digital currency news has exploded from Fintech specialists to the man on the street. This is now a mainstream media topic, and what happens in Bitcoin happens to the world."

David Bailey
CEO, BTC Media

DEVELOPER TOOLS

"It's exciting to be a part of the growth and maturation of the blockchain and Bitcoin ecosystem. Previously we saw products geared towards true believers or technical wizards. We are beginning to see practical, intuitive applications being built for real mainstream users with intuitive, consumer friendly user experiences. This shift has allowed financial institutions, corporations and regulators to take a second look, embracing a platform they once resisted."

Justin Newton
CEO, Netki

BLOCKCHAIN TECH

"Bitcoin will serve a purpose and Ethereum will serve a different one. The ideas I see coming out of it are immense and are the most adventurous in years. The opportunity is huge and I hope a lot of the investment types understand that real, long term money is happening on the fringes."

Tony Sakich
Director of Marketing, Augur

FINANCIAL SERVICES

"Bitcoin use is continuing to grow across borders. 12% of our users, all of whom are international receiving wages from US employers, encompass over 50% of our volume. While we continue to see growth with domestic employees receiving wages from the like of Google, Microsoft or even the U.S. Navy, we foresee the international use-case growing significantly over the next few years until the value of Bitcoin stabilizes."

Jonathan Chester,
Founder & President, BitWage

<http://www.visualcapitalist.com/the-bitcoin-universe-explained/>
